CSCI 363 : Modeling Assignment II
2 November 2019

1. Identify the Deficiencies in the GUI and give reasons as to why it is deficient.
    a. The order of the options : I believe that the order is off in searching, it should begin with the search type (Search Using), then continue on with "Choose Collection," "Keyword or Phrase," then "Adjacent Words." This order because it will allow for a better sense of steps.
    b. Wording of "Choose Collection" : at first glance I do now know what collection is referring to.
    c. Color coding of buttons : there is no major difference between the appearance of the buttons which can result in people accidentally pressing the wrong button.
    d. Title of the Box : this title should be in larger text that brings more attention to it for the user to know that they are in a search box rather than anything
    e. Realign "Adjacent Words" : realigning this section to match the other text boxes will make this model more formal looking
2. Redesign the GUI

larger & bold

LIBSYS : Search

all aligned

Search Using : | Title |

Keyword or Phrase : | _____ |

Choose Collection : | All |

Different order, more in sync

Adjacent Words :   ● Yes   ○ No

[Search]   [Reset]   [Cancel]

Different colors to represent diff. out comes
